

71. Confirmando e iniciando una orden desde el carrito de compras en Laravel

Añadir botón a `carts/index.blade.php`:

```
...
    @else
        <a class="btn btn-success mb-3" href="{{ route('orders.create') }}" >
            Start order
        </a>
    <div class="row">
...

```

Añadir ruta a `routes/web.php`:

⚠ Los nombres de los recursos van en plural.

```
...
Route::resource('orders', 'OrderController')->only(['create', 'store']);
?>

```

Modificar el `OrderController`:

⚠ Borrar todos los métodos menos `create()` y `store()`.

```
<?php
namespace App\Http\Controllers;

use App\Models\Order;
use App\Http\Requests\StoreOrderRequest;
use App\Http\Requests\UpdateOrderRequest;
use App\Services\CartService; // ----- IMPORTANTE

class OrderController extends Controller
{
    public $cartService;

    public function __construct(CartService $cartService)
    {
        $this->cartService = $cartService;
    }

    /**
     * Show the form for creating a new resource.
     *
     * @return \Illuminate\Http\Response
     */
    public function create()
    {
        $cart = $this->cartService->getFromCookie();

        if(!isset($cart) || $cart->products->isEmpty()) {
            return redirect()

```

```

        ->back()
        ->withErrors("Your cart is empty!");
    }

    return view('orders.create')->with([
        'cart' => $cart
    ]);
}

/**
 * Store a newly created resource in storage.
 *
 * @param  \App\Http\Requests\StoreOrderRequest  $request
 * @return \Illuminate\Http\Response
 */
public function store(StoreOrderRequest $request)
{
    //
}
}
?>

```

Crear la vista `orders/create.blade.php`:

🔗 Copiar el código de `products/index.blade.php` al nuevo archivo.

```

@extends ('layouts.app')
@section('content')
    <h1>Order details</h1>
    <div class="table-responsive">
        <table class="table table-striped">
            <thead class="thead-light">
                <tr>
                    <th>Product</th>
                    <th>Price</th>
                    <th>Quantity</th>
                    <th>Total</th>
                </tr>
            </thead>
            <tbody>
                @foreach($cart->products as $product)
                    <tr>
                        <td>
                            
                            {{ $product->title }}
                        </td>
                        <td>{{ $product->price }}</td>
                        <td>{{ $product->pivot->quantity }}</td>
                        <td>
                            <strong>
                                {{ $product->pivot->quantity *
                                    $product->price }}
                            </strong>
                        </td>
                    </tr>
                @endforeach
            </tbody>
        </table>
    </div>

```

```
</div>
```

```
@endsection
```
