

# 61. Conoce las relaciones polimórficas uno a muchos

## Definición

Un **Product** puede tener múltiples **Image**, como vemos en el diagrama:

✓ Al tener ya preparado el método `imageable()` en `Image` es mucho más rápido implementarla.

## Relaciones polimórficas 1:n en el proyecto

Image ↔ Product.

## Laravel: crear las relaciones

En **Product**:

```
public function images() {
    // Importante indicar el nombre de la relación polimórfica
    return $this->morphMany(Image::class, 'imageable');
}
```

## Tinker: probar las relaciones

```
C:\Users\llemi\Desktop\Lunk\Laravel\ola>php artisan tinker
Psy Shell v0.11.8 (PHP 8.0.9 - cli) by Justin Hileman

// Obtenemos el producto con id=2 de la lista de products
>>> $product = App\Models\Product::find(2)
⇒ App\Models\Product {#4558
    id: "2",
    title: "In iusto aspernatur porro.",
    description: "Perspiciatis iusto deserunt qui deleniti velit. Sequi quia debitis explicabo voluptas.",
    price: "80.74",
    stock: "8",
    status: "available",
    created_at: "2022-11-12 11:15:27",
    updated_at: "2022-11-12 11:15:27",
}

// Le asignamos una imagen mediante el método morphMany()
// de Product->images()
>>> $product->images()->save(App\Models\Image::factory()->make())
⇒ App\Models\Image {#4595
    path: "img/products/8.jpg",
    imageable_id: 2,
    imageable_type: "App\Models\Product",
    updated_at: "2022-11-12 12:27:00",
    created_at: "2022-11-12 12:27:00",
    id: 2,
}

// Buscamos la imagen con ese id (fijémonos en el imageable_type)
>>> $image = App\Models\Image::find(2)
⇒ App\Models\Image {#4561
    id: "2",
    path: "img/products/8.jpg",
    created_at: "2022-11-12 12:27:00",
    updated_at: "2022-11-12 12:27:00",
    imageable_type: "App\Models\Product",
    imageable_id: "2",
}

// Imageable sabe, por el imageable_type = Product y el imageable_id,
// que debe mostrar el Product con id = 2
>>> $image->imageable
⇒ App\Models\Product {#4587
    id: "2",
    title: "In iusto aspernatur porro.",
    description: "Perspiciatis iusto deserunt qui deleniti velit. Sequi quia debitis explicabo voluptas.",
    price: "80.74",
    stock: "8",
    status: "available",
    created_at: "2022-11-12 11:15:27",
    updated_at: "2022-11-12 11:15:27",
}
```

Creamos una nueva **Image**, la asignamos y comprobamos que, efectivamente, un **Product** puede contener muchas.

```

>>> $product->images()->save(App\Models\Image::factory()->make())
=> App\Models\Image {#4601
  path: "img/products/5.jpg",
  imageable_id: 2,
  imageable_type: "App\Models\Product",
  updated_at: "2022-11-12 12:34:29",
  created_at: "2022-11-12 12:34:29",
  id: 3,
}

>>> $product = $product->fresh()
=> App\Models\Product {#4550
  id: "2",
  title: "In iusto aspernatur porro.",
  description: "Perspiciatis iusto deserunt qui deleniti velit. Sequi quia debitis explicabo voluptas.",
  price: "80.74",
  stock: "8",
  status: "available",
  created_at: "2022-11-12 11:15:27",
  updated_at: "2022-11-12 11:15:27",
}

>>> $product->images
=> Illuminate\Database\Eloquent\Collection {#4565
  all: [
    App\Models\Image {#4564
      id: "2",
      path: "img/products/8.jpg",
      created_at: "2022-11-12 12:27:00",
      updated_at: "2022-11-12 12:27:00",
      imageable_type: "App\Models\Product",
      imageable_id: "2",
    },
    App\Models\Image {#4590
      id: "3",
      path: "img/products/5.jpg",
      created_at: "2022-11-12 12:34:29",
      updated_at: "2022-11-12 12:34:29",
      imageable_type: "App\Models\Product",
      imageable_id: "2",
    },
  ],
}

```
